- 1 Connect the camera video input
Connect only if the car dont have factory rear cam and customer whants it.
- 2 Connect the original car AUX left-channel
- 3 Connect the original car AUX right-channel
- 4 Connect the original car display main wire
- 5 Connect the original car display main wire socket

External speaker
For sound out put yo can use bluetooth from android to car bluettoth, Aux is also possible. For Aux leave the RCA cabels like they are and plug in the dummy aux 3.5 in the car .

+ 12v to feed input device **VIDEO INPUT**
No need connect this wire, if not added extra video input

Connect GPS antenna
+ 12v to feed input device **VIDEO INPUT**
No need connect this wire, if not added extra video input

USB input for movies or pictures

Use of the android system.

Once the screen is installed into the car and gps antenna is installed,turn the ignition to on.

Press on external button or voice key on steeringwheel button (3sec) and android screen will appear,touch the x mark so the screen gets calibrated.

This screen will always come up but second time press exit as the screen is calibrated. Once you are in Android mode you can go to next video input or to factory screen with press and hold anywhere on the screen for 4 sec.

Set your country language in settings menu,to get back from anywhere just slid you finger from top to button and a bar will come up with backarrow and home button.

If you connected the Aux sound to cars aux input then you need to select AUX in factory screen before you go into android to watch movies if you want the sound to go to the factory speakers. For best sound connect the android bluetooth to the cars bluetooth

To use internet or mail etc you need to make your phone a hotspot and turn on the wifi in the setting menu in the android system.

If extra video inputs is installed then press and hold on the screen for 4 sec and the video input will appear,and sound if connected,same goes if you whant to return to factory

If sound and video is connected to one of the extra video inputs (like from a phone mirroring)then the sound will come trough the factory speakers if aux is connected to th
